Diaper genie complete assembly instructions

Managing dirty diapers on a daily basis requires an effective system for containing and disposing of them. One option is the Diaper Genie disposal system, designed to contain the diapers and the odors so you can comfortably take them out to the trash 1. Once you know how to use your Diaper Genie, you can manage your baby's diapers more easily. Diaper Genie Features The Diaper Genie system lets you operate it with one hand while holding your baby in your other arm 1. It tightly seals bags in multiple layers for odor control. The Diaper Genie system will hold up to 34 newborn diapers at a time. The Diaper Genie II has a lid on the top that you lift open to use the system, while the lid on the Diaper Genie II Elite opens with a foot pedal. Diaper Genie Assembly Assembling the Diaper Genie involves snapping the bottom and top halves of the container together at a hinge. Fit the "A" and "B" pieces together by matching the bar on piece "B" with the slot in the hinge on piece "A." Push the pieces firmly until they click into place. Position piece "A" on top of piece "B" and click them into place again to finish the assembly. Prepare the Diaper Genie by inserting the tubular plastic film. Remove the lid from the system and set it aside. Remove the outer seal of plastic from the film and discard it. Pull about 18 inches of film from the roll and tie a tight overhand knot at the end of the plastic. Insert the film into the top of the Diaper Genie and push the knot down through the clamp with your hand. Place the lid back onto the Diaper Genie, clicking it into place. Diaper Disposal Roll used diapers tightly and secure them with the diapers' adhesive tape. Avoid leaving the diaper tape unsecured, because the tape could stick to the plastic film that holds the used diapers and tear it. Open the lid of the Diaper Genie and insert the used diaper down into the container, pushing it through the clamp. Check to make sure the clamp closes again after you finish inserting the diaper. Close the lid. Emptying the Diaper Genie The Diaper Genie is full when the clamp no longer opens easily due to resistance from the full chamber. Press the button at the center of the unit to open the unit at the hinge. Pull out the film from the roll and cut it off, leaving enough so you can tie an overhand knot to seal in the diapers. The Diaper Genie has a built-in childproof cutter for cutting the film. Remove the tied bag of used diapers from the Diaper Genie and dispose of it. Pull 18 inches of plastic from the roll, tie an overhand knot, push the knot past the clamp and close the Diaper Genie tightly until it clicks and is ready for use. Refilling the Diaper Genie As you insert used diapers, watch the roll of film for an indicator that it's time to replace it. Once you use up the film, empty the used diapers from the Diaper Genie and remove the empty spindle from the roll. Then insert a new bag roll. Photo Credits Melissa Kirk/Demand Media When you have a new baby, one of the first things you'll want to purchase is a quality diaper pail. Playtex, a maker of a variety of baby products, has reinvented its original diaper pail into the Diaper Genie II Elite, a system that offers the best odor control and ease of use, making it more hygienic than prior models 1. This system can be put together in a cinch, and daily use is even easier. Assembly requires no special tools. Assemble your Diaper Genie II Elite 1. This diaper-disposal system comes in two pieces, which must be snapped together to complete assembly 1. The top half of the system has a closable lid, and the bottom half has a foot pedal. Put the top half on the bottom half and push down until you hear a click, which means assembly is complete. Insert the Diaper Genie II refills. The refills are used similarly to the way a garbage bag would be placed inside of a pail. Open the Diaper Genie II Elite and put the refill through the clamp down to the bottom of the system 1. The refills are made with a five-layer film system that reduces odor and germs. Step onto the foot pedal located at the bottom of the Diaper Genie II to open the lid. Drop the diaper into the disposal top 1. Lift your foot off the foot pedal to close the lid. Remove dirty diapers by pushing the button on the front and lifting the top half of the disposal system up. Cut the diaper refill bag with the internal childproof bag cutter located toward the top of the lower half. Tie the bag and throw it away. Photo Credits Jupiterimages/BananaStock/Getty Images 1 Take inventory of the pieces that came with your Diaper Genie®. Read over the instruction manual that came with your Diaper Genie® to make sure you understand all the parts in the package and how each one functions. Before you start the assembly process, make sure you have all the parts listed in the instruction manual. If you are missing anything, wait to assemble the unit until you get the missing pieces. If you find you are missing any pieces, call the customer support line listed in the manual and request replacement parts be sent to you. 2 Attach the top and bottom at the hinge. The first step in assembling your Diaper Genie® is to attach the top (piece A) and bottom (piece B) of the genie together. There is a hinge on the bottom of piece A and a bar at the top of piece B. While holding the top at a 45 degree angle, place the bar from piece B into the hinge and press down until they click together. You don't need to force the hinge into place. Just push it until you hear a click. Advertisement 3 Flip the top over and click it into place. After securing the hinge between the top and bottom of your Diaper Genie®, flip the top over the bottom of the genie and press down until they click together. At this point, your genie should look like a tall, slim cylinder. 4 Prepare a liner refill for your Diaper Genie®. You will need to place the plastic liner in your genie in order to use it. To add a new refill, pull the tab on the refill to remove the plastic seal. Then, pull downwards until you've released about 18 inches of film (or enough to fill the bottom of the Diaper Genie®). Tie a knot in the bottom of the liner.[1] An overhand knot works best for securing the bottom of your liner.[2] 5 Place the liner in the genie. Finally, place your liner refill in the top of your Diaper Genie® and push the knot you've tied down, through the clamp. Close the lid on your Diaper Genie®. You're now ready to start using it.[3] Advertisement 1 Roll diapers into a tight ball. After you've changed your baby, roll their diaper up tightly, securing it with the adhesive tape on the diaper. It is best to roll your diaper into an oblong shape or a small, round bundle.[4] The tighter you can wrap your dirty diapers, the more the Diaper Genie® will hold before needing to empty it. Do not leave the adhesive tape unsecured because this can attach to the liner in your genie, causing it to rip. Generally, the Diaper Genie® will hold approximately 34 newborn diapers at one time. This number will decrease as your child ages.[5] 2 Insert the dirty diaper. Once you have rolled your dirty diaper, lift the lid of the Diaper Genie® and insert the diaper. Push the dirty diaper all the way down through the clamp. Ensure that the clamp closes again after you have inserted the diaper. Once you have done this, close the lid.[6] Once the clamp closes, the Diaper Genie® twists the film directly under the clamp, sealing the dirty diaper at the top. 3 Remove the top of the pail. Once your Diaper Genie® is full, unhinge the top from the bottom by pushing the button located in the middle of the genie (where the top and bottom parts meet). Flip the top part over, revealing the built-in cutter mechanism on the inside.[7] 4 Cut the liner at the top. After you have unhinged the top and revealed the childproof cutter on the genie, pull the liner into the cutter mechanism and press down until it severs the liner. Tie a knot at the top to enclose your diapers in the liner. Ensure you leave enough room at the top of your diaper roll to tie a knot—usually three or four inches. 5 Remove the full liner. Once you have tied the top of your liner, lift the full bag out and dispose of the dirty diapers wherever you dispose of your garbage outside. Advertisement 1 Tie a knot in the liner. Once you have removed the full liner, be sure to tie a knot at the start of the new liner. If you fail to do so, the dirty diapers you place in the genie will fall out the bottom of the liner when you go to remove the next full load. 2 Pull out about 18 inches of liner. After tying a knot at the end of the liner you have just cut, pull out about 18 inches of liner, like you did when you were preparing to use your Diaper Genie® for the first time. Ensure that the amount you pull out is enough to fill the bottom of the pail.[8] 3 Secure the top back onto the bottom. Finally, flip the top of the Diaper Genie® back over so it is sitting atop the bottom of the genie. Press down until the two parts click back into place.[9] 4 Clean your Diaper Genie® weekly. As you can imagine, you will need to clean your Diaper Genie® routinely to keep germs and any lingering smell from your child's dirty diapers to a minimum. The best way to do this is to clean your genie at least once a week. To do so, take the Diaper Genie® apart and wipe down both the inside and outside with a bleach-based solution. If you'd like to be more thorough, wipe the genie down with an anti-bacterial cleaning wipe several times throughout the week. Furthermore, whenever you change the liner in your Diaper Genie®, spray the inside with a disinfecting and odor-neutralizing spray.[10] 5 Invest in a deodorizing filter. The Diaper Genie® doesn't come with a built-in deodorizer, but investing in one is a good way to help reduce the daily odor from your child's dirty diapers. You can find deodorizing carbon filters for your Diaper Genie® at nearly all general merchandise retailers, like Walmart or Target. These filters come with a case that attaches to the lid of your Diaper Genie® and several individual carbon filters. To use, simply unlatch the top of the case, place a filter inside, and snap the case closed. Filters should be replaced at least every 90 days for the best results. [11] Advertisement Add New Question Question The lid came unhinged. Is there a trick to getting it back in without breaking it? Catherine Palomino is a former Childcare Center Director in New York. She received her MS in Elementary Education from CUNY Brooklyn College in 2010. While holding the top at a 45-degree angle, place the bar from piece B into the hinge and press down until they click together. If this cannot be done with ease, then do not force it and instead contact the manufacturer for assistance. Question Does it take batteries? Diaper Genies neither needs nor uses batteries. It is a manual push that will propel the diaper into the bag inside the machine. Question How do you know when it is full? It is full when you cannot comfortably fit more diapers into it. Question The clamps fell apart. How do I put it back together? There are two pieces to the clamp—the piece with the spring attached and the piece with the cutter. Hold the two pieces so that the curved end of the piece with the cutter and the side of the other piece on which the spring is located are pointing at each other. Hook the curved end of the piece with the cutter under the spring on the other piece. Next, flip the piece with the spring under, hooking it into the track on the cutter piece. Once the pieces are connected, hold them so that the cutter mechanism is pointed at the ceiling and snap them back into place inside your Diaper Genie®. Watch a video demonstration. Question Do the diapers go into their own bags? Yes, every diaper, if put into the Diaper Genie separately, will be packed into its own small bag. Ask a Question Advertisement Thanks! Thanks! Thanks!
